

## Adjustable Continuous Hinge

### ***Introducing the Special-Lite® SL-120 Continuous Hinge – A simple, easy-to-install solution to compensate for out-of-plumb jambs.***

The Special-Lite® Adjustable Hinge provides an easy, cost-effective way to ensure a perfect door installation for new construction or door replacement. When the rough opening or existing framing is not perfectly plumb or square, the Special-Lite Adjustable Hinge provides a means of compensating for these irregularities. With adjustability of up to 1/8" in either direction, or opposite directions top to bottom, new doors can hang properly in less than perfect openings.

Abusive testing beyond 3,000,000 cycles has proven that the durability of the Special-Lite Adjustable Hinge matches the durability of Special-Lite Doors. That's why they're covered by the same 10 year parts and labor warranty.

Standard Class I anodized finishes are clear and dark bronze, with optional colors available. Hinge caps can be painted to match door or frame colors.

### **Advantages of the Special-Lite SL-120 Adjustable Hinge:**

- Full-length alignment guides on door and frame simplify hole templating
- Adjustments made from hinge to frame without removing door
- Top and bottom of hinge adjustable in opposite directions to level door
- Gap between pairs can be closed or opened up to 1/4"
- Hinge is anodized after all machining operations for superior protection
- Self-locking dog-point set screws use standard 1/8" hex key
- Hinge ships in neutral position, allowing 1/8" door movement in either direction after installation
